Chapter 1

Render_Hame

1.1 Render: Hame

HAM-E is an 8-bit display adaptor manufactured by Black Belt
Systems, Inc. In addition to 256-color register-based palettes, it
extends the Amiga's Hold and Modify (HAM) techniques to 8-bits of color
depth (unlike HAM's 6-bits). HAM-E's extended HAM mode yields 256,000
colors instead of HAM's 4,096

Please consult the manual for a detailed description of the various
options available in the HAM-E Render module control panel.
