MS Exchange Client / Windows Messaging Extension for Windows 95/NT

Copyright (c) 1996 Ludek Mokry. All rights reserved.

Version: 1.00

Last Update: December 14th, 1996

This software is freely distributable.

Introduction

This extension allows the user to show information about all recipients (To, Cc, Bcc) - in archived messages.

The command is found on the Tools Menu (Recipient info) within the main windows (also is possible to put it on toolbar).

RcpInfo is a Freeware.

Features:

- Show all recipients of selected message.

Environment:

- Windows 95, Windows NT
- MS Exchange Client / Windows Messaging (provided with Windows 95/NT)
- MS Exchange Client for MS Exchange Server

Installation

Copy the DLL **RcpInf32.dll** into your "\windows\system" directory. Register the DLL by double-clicking **RcpInf32.reg** in Explorer.

Deinstallation

Exit and log out of Exchange. Start RegEdit, open the key

HKEY_LOCAL_MACHINE\Software

\Microsoft

\Exchange

\Client

\Extensions

and delete the "LM Recipient Info" tag and its value. Then delete the file **RcpInf32.dll** from "\windows\system".

Try Our Other Extension

- **ExLife For Windows 95/NT (shareware)**

Extend features of MS Exchange Client (MS Windows Messaging). Add FILTERS (online and offline inbox assistant for incoming and outgoing messages - NOT have to be connected to an Exchange Server) and SIGNATURE. *OnLine* - move messages immediately after delivery, reading (non-read) and sending. *OffLine* - items from current folder are moved to other folders by defined condition.

Features:

- 1 Filter current message folder. Items are moved to different folders by defined conditions. You can choose from as many types of filter as you define.
- 2 Automatic filter incoming messages after delivery.
- 3 Automatic filter after reading non-read messages.
- 4 Archiving of outgoing messages into defined folders - controlled by conditions (works only in "offline transferring internet mail mode", not in "scheduled mode" or "remote mail mode").
- 5 Unlimited number of user defined filter condition.
- 6 It's possible to filter by these mail items: From, To, CC, Subject and Message.
- 7 3 methods of comparison Items and entered values: FullString, SubString and Prefix.
- 8 Append signature to end of mail.
- 9 Support for multiple exchange profiles.
