

RPlay for Windows 3.1

RPlay is a random sound player. Pick a .wav file and a range within which to play the file. Rplay will play this sound at random intervals between the limits you have set. Each time the sound plays a new random interval is generated. To play multiple sounds at multiple intervals initiate several instances of Rplay.

Rplay is provided as shareware and your support is greatly appreciated. To register this copy please send \$15.00 to
