What is **Bail**?

If you've ever accidentally launched a program and had to wait for it to completely load before you could quit it, you need Bail. Bail gives you an opportunity early in the launch cycle of the application to quit.

How do I **Bail**?

When any application loads, **Bail** shows a couple of dots up in the left corner for approximately 3 seconds. If you wish to bail out before the loading continues, hold down the mouse button and you will return immediately to the Finder. If you don't want to wait for the 3 seconds, hold down the 'g' key ([G]o, get it?).
