# WS-TIMER Version 6.01

To install WS-TIMER just unzip the archive to a temporary directory and run the SETUP.EXE program. This will install all the necessary files in the directory of your choice. A folder will be created in Program Manager with icons for WS-TIMER and all documentation files. The first time you run WS-TIMER you will be prompted with which COM port to monitor. Just click on the COM port of your choice then click on OK. Then you will need to setup WS-TIMER with your personnal information.
