

Context for WordPerfect, Version 2.0

This is a copy of the NET RELEASE of **Context**.
It is supplied as an EVALUATION COPY
which must be registered in order to become
fully functional.

Before registering, you are limited to
2 defined ALIASES. This should be enough to
appreciate the utility of user defined concept
words or "aliases".

Upon registration, the maximum number of ALIASES
that you can define goes up to 50, and the
annoying "annoyance" boxes go away.

**Context for WordPerfect ONLY RUNS in
Windows 95.** There are no plans
to port it to Win3.

Context is intended for **WordPerfect for
WINDOWS**, no DOS versions are contemplated.

This release of **Context**
will run on all versions of
WordPerfect for Windows.
(6.0, 6.0a, 6.1, and 7)
