1.2 intro

Introduction =====

Welcome to the AGA Toolkit '97 CD. This compilation provides a wealth of Utilities, ready to run, for Workbench 3.0 and above.

Although many of the programs will work on lower specification machines, the compact disc has been compiled and tested with the latest machines in mind.

To set the compact disc up ready to use just double click on the 'AssignCD' icon. This will complete the necessary assigns for the programs to find their libraries etc. Additionally we have made it possible for the ASSIGN function temporarily set up NEW

ICONS for you and the correct font for the Workbench window.

You don't have to use the NEW ICONS, however if you do then you will see the Workbench front end prepared in it's best light. This will not do any permanent changes to your system, you just reboot the Amiga to return to your original setup.

Some of the items this Amiga Guide document require the following files, just click on the buttons below to copy them to your drive.

PPGUIDE
POWERPACKER.LIBRARY

Do not use these buttons if you already have these files or are unsure if you have these files. Do not use the buttons if you have already used the 'ASSIGNCD' icon. You will know if you need these when the file 'ReadMe' buttons fail to work.

This Amiga Guide document has been created to provide information on the Utilities contained in this compilation. From this guide you can get a brief description of each program, read the official documentation provided with each program and even run the program itself in the majority of cases. For CLI only programs you can open a CLI window and use the syntax provided in the guide to make use of the programs.

We hope that you appreciate the amount of work required to provide this menu and it's facilities and that it aids your exploration of the many programs provided.

Regards

Weird Science.
