          Configuration preferences

          History
          Bug fixes and updates
```

1.2   What it actually does...

```
  Introduction
  ============

  This blanker draws a colorful plazma on the screen.
```

1.3   Configuration preferences...

```
  Interface
  =========

        Save - save and use the current settings.
```

```
         Use - use the current settings.

        Test - test the blanker under the current settings

      Cancel - cancel all changes.

 Color Gradient - this sets how the color is to be spread across the
                  screen. Setting to low values will reduce the differences
                  between colors, high values increase the differences giving
                  mnore color bands on screen.
                  Default: 100.

   Display Mode - the screen mode to use. If the preferred screen cannot
                  be opened then the default screen mode will be tried, if
                  this fails then the minimum screen mode required for this
                  blanker will be tried, if that fails then the blanker will
                  quit and let SwazBlanker choose an alternative blank
                  method.
                  Default: High-Resoloution Laced, 16 Colors.
```

1.4 Bug fixes and updates...

```
 History
 =======

 None at the moment.
```

1.5 index
