Invalid password  
The File Conversion Wizard can not be run while Microsoft Excel is in-place.  
All the files you selected have been converted successfully.  
At least one of the files you selected has not been converted successfully.  
The directory you selected is protected (you might have read-only access to the server).  
The file name changed because  
already exists in the destination directory you selected.  
Source directory:  
Destination directory:  
File Conversion Wizard Report  
(Copy  
The folder or server location that contains the new folder does not support long file names. Enter a new folder  
The folder you want to create already exists.  
No folder name entered.

Welcome to the File Conversion Wizard.  
This wizard helps you convert a group of files to Microsoft Excel 97 workbook format.  
All files to be converted must be in the same folder and have the same file format. If necessary, click Cancel and  
If you have a number of files in different file formats, group the files by format and run the File Conversion wizard  
In this step, you select the files you want to convert.  
If the wrong files are listed, click Back and make sure the correct file format and folder are selected.  
In this step you select the folder for the converted copies of the files.  
Each file is saved with its current name plus the .xls file extension. The original files are left unchanged.  
When you click Finish, Microsoft Excel reports the results of the conversion in a new workbook.
