Main Window

The image files contained in the folder you select on the left appear in the Preview area on the right. Click a part of the illustration below to display more information about that part of the screen.

Zoom Bar Drag this slider left and right to change the <u>image magnification</u>.

Yo can also change the image magnification by clicking or

\vec{\vec{v}} HintTo toggle the zoom bar display on and off, select Zoom Bar from the View menu.

Status Bar

Status messages appear in this area.

Fint

To toggle the status bar display on and off, select Status Bar from Tool Bar Display in the View menu.

Menu Bar

The Menu Bar appears immediately below the window title bar, and includes the following menus:

<u>File menu</u> Edit menu View menu Help menu

Shortcut keys are also available. Press Alt key + the underlined letter (in the menu bar or menu item) to use the shortcut keys.

Note that the menu bar in the Main Window is different from the menu bar in the <u>Viewer window</u>.

Scrollbars

Drag the scrollbars to scroll the Preview area.

Back Button

Click this button to return to the image previously displayed in the Preview area. To return to images displayed earlier, click the right of the Previous button and select the desired folder name from the list displayed.

Forward Button

When the previous Preview area is displayed, click this button to return to the next Preview area in chronological order. To return to images displayed later, click the right of the Next button and select the desired folder name from the list displayed.

Up Button
Displays slides from the folder at the next highest level.

Cut Button
Cuts selected images and copies them onto the clipboard.

Copy Button
Copies selected images to the clipboard.

Print Button
Click this button to print the selected images.

Information Button
Click this button to display and change information for the selected image.

Help Button
Click this button to display PictureGear™ online help topics.

Zoom In Button
Click this button to change the mouse pointer to a magnifying glass (zoom in).

Zoom Out ButtonClick this button to change the mouse pointer to a magnifying glass (zoom out).

Move Button
Click this button to change the mouse pointer to a hand.
Scroll by dragging the hand inside the Viewer window.

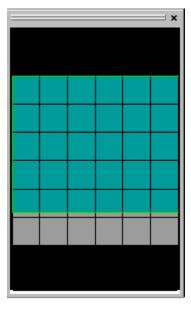

Pointer Button
Click this button to change the mouse pointer to an arrow.

Tree View

This function displays images in Folder view and Device view. Select a folder in one of the view areas to display that folder's images in the Preview area. To view a part of the image not displayed in the window, drag with the scrollbar.

-> When peripheral devices (<u>Sony Video Camera</u>, <u>Sony Digital Still Camera DSC-F55/F505</u>, and <u>MS Serial Port Adaptor</u>) are connected, folder icons for each device are displayed in the Device view, and data recorded on each device can be viewed the same as for images stored in folders on hard disks.

Navigation area

The corresponding screen is displayed in the Preview area.

Navigator

This area displays miniatures of images in the selected folder. (The shape of the miniatures may vary slightly depending on their arrangement.)

The images inside the green finder border appear in the Preview area. To scroll the Preview area, move the pointer over the finder to change it to a hand shape, and then drag the finder through the Navigation area. Select Format

This area displays a list of file types. File types are displayed and you can select a file type to be displayed by placing a check next to the desired file type. That file type will not be displayed if you remove the check.

Preview areaThis area displays images from the folder selected in tree view.
Images displayed in the Preview area are called slides.

Close Rutton

Click this button to close the Main Window and exit PictureGear™.

Starting PictureGear™

1 Click the Start button on the taskbar and point to Programs -- PictureGear 4.1 Lite -- PictureGear 4.1 Lite. When you start PictureGear™ for the first time, the sample slides provided with PictureGear™ are displayed automatically.

Next time you start PictureGear, the slides in the folder you last viewed will be displayed.

To display other slides, use the tree view to select the folder containing the slides you want to view, then wait a moment for the slides to appear in the Preview area.

Exiting PictureGear™

Select Exit from the File menu.

Supported Image File Formats

PictureGear™ supports the following image file (still image and movie) formats:

Image file formats which can be displayed by PictureGear™

Still Images

File Extension File Format(s)

.BMP Bitmap .JPG, .JPEG **IPEG** .TIF, .TIFF TIFF .FPX FlashPix .GIF GIF

DV still picture* .DVF .PNG **PNG** "MemoryStick"

*DV still picture formats are used for image files created with Sony products.

With JPEG format, DCF-compliant file formats can be used. DCF is an abbreviation for "Design rule for Camera File System" as established by JEIDA (the Japan Electronic Industry Development Association). You cannot use TIFF formats below 8 bits and compressed TIFF format.

Movie

File Extension File Format(s) .MPG, .MPEG MPEG1

You cannot display AVI format files that are not supported as standard Video for Windows files.

Image file formats that PictureGear™ can save as

Still Images

File Extension File Format(s) Bitmap .BMP

.JPG, .JPEG **JPEG** .TIF. .TIFF TIFF

.DVF DV still picture* .GIF **GIF**

.JPG "MemoryStick" *DV still picture format is used for image files created with Sony products.

When writing images in bitmap format, PictureGear™ uses a 24-bit format.

You cannot use TIFF formats below 8 bits and compressed TIFF format.

Sony proprietary formats

DV still picture format

This is used by Sony digital video recorders (Such as the DCR-TRV7).

Deleting Images

Selecting Images in the Preview Area

- -> To select a single image, click it.
- To select a range of images (including the first and second images), click the first image in the range, then hold down the Shift key and click the last image in the range.
- -> To select several non-adjacent images, hold down the Ctrl key and click the images.
- -> To deselect an image, hold down the Ctrl key and click an already selected image.

You can use the mouse to drag images and sound slides into another application's window, and then use the images in that application. However, this is restricted to image file formats that the other application supports.

Moving Slides to Another Folder

- 1 In the Preview area, <u>select the images</u> you want to move.
- 2 Select Move from the File menu.
- **3** Click the Browse button to select the Target Folder.
- 4 If you want to change the file name, enter the change in the Target Folder box.
- 5 Click OK to move the selected images.

Alternatively, you can drag images to another folder on the same drive, and release the mouse button. You can also change the name of the selected image and then move it.

Copying Slides

- 1 In the Preview area, <u>select the images</u> you want to copy.
- 2 Select Specify File Name and Duplicate from the File menu.
- 3 Click the Browse button to select the Target Folder.
- 4 If you want to assign a different name to the copy, select the Rename check box and then select one of the following options in the drop-down list.

Original name - Adds the text you enter to the beginning of the original file name.

Increment number - Replaces the image name with an automatically generated number.

5 Click OK to copy the selected images.

You can also copy images to another folder on the same drive by holding down the Ctrl key, dragging the images to the desired folder, and then releasing the mouse button. If you drag images to another drive, you do not need to hold down the Ctrl key.

You can also change the name of the selected image and then copy it.

Deleting Slides

- **1** In the Preview area, <u>select the images</u> you want to delete.
- 2 Select Delete from the File menu, press the Delete key, or drag and drop the image you want to delete into the trash can on the Windows desktop.
- **3** Click OK when asked if you want to erase the files.

You can also sort the images.

Navigation Area

The corresponding screen appears in the Preview area.

Navigator

This area displays the images in the selected folder in a miniature slide table.

The images inside the finder border appear in the Preview area. (The shape of the images varies according to image layout.) Images displayed are those that are enclosed by the finder (the box with the green border). To scroll the Preview area, move the pointer over the finder to change it to a hand shape, then drag the finder over the images.

Scrolling the Preview Area

Drag the Scrollbars below and to the right of the Preview area in the desired direction.

To drag the Preview area itself, click on the toolbar and then drag the Preview area. Alternatively, you can select Cursor -- Hand from the View menu, then drag the Preview area.

If you scroll the Navigation area, the Preview area will also scroll.

Zooming the Display

There are three ways to zoom in or out on the images in the Preview area.

Move the Zoom Bar slider.

Drag the slider to the right to zoom in, and to the left to zoom out.

Even if you click 🛂, or

you can zoom in or out.

Select Zoom from the View menu, then click the desired item.

Zoom In - Increases the ratio by one step.

Zoom Out - Decreases the ratio by one step.

25%, 50%, 100%, 200%, or 400% - Selects that enlargement ratio.

Select Zoom Fit to Window from the View -- Arrange menu.

Sizes the images so that all the images in the selected folder fit into the Preview area.

Change the mouse pointer to a magnifying glass.

To zoom in, click Zoom In from the View -- Zoom menu and click the left mouse button, or click Zoom Out and click the right mouse button.

To zoom out, click Zoom Out from the View -- Zoom menu and click the left mouse button, or click Zoom In and click the right mouse button.

Displaying Slide Information

Display slide information as follows:

1 Select the image for which you want to display information.

To select the slide, <u>display</u> it using the Viewer Window.

If you are using the Preview area, click the slide to select it. You can also select multiple slides.

2 Select File Information from the View menu, click the Information button $\overset{\bullet}{V}$ on the toolbar, or click the right mouse button, then click File Information.

The File Information dialog box appears. For details on the File Information dialog box, see $\underline{\text{File Information}}$ $\underline{\text{Dialog Box}}$.

3 Select the information tab whose contents you want to display.

The information is displayed.

When information for multiple slides is displayed in the Preview area, you can display information for other slides by dragging the slider to the left and right.

4 Click OK

The slide information is changed and the dialog box closes.

File Information Dialog Box

You can display information for selected slides. Click the tab whose information you want to display.

Basic Information tab

Information contents differ according to the selected slide type (still image and movie slides).

Still image and movie slides

You can display information for the following: folder name, file name, file type, file size, creation date, modified date, and recording date.

You cannot use the Open Folder button.

If the Read-only box is checked, a warning message box is displayed when this slide is deleted or saved.

If you click Change, the Change Photo Date dialog box appears and you can change the recorded date information.

Only still images loaded from a digital still camera, images in MemoryStick format, and DCF-compatible image file formats can be displayed in the Photo Date items box.

Detailed Information tab

Information contents differ according to the selected slide type (still image and movie).

Still images

Displays information for the following: image size (in pixels), number of colors (in bits), and resolution (in dpi).

Values displayed for DV still image format slides are those resulting after the image has been converted for display with square pixels. (The pixels of DV still images are vertically elongated, and are converted for correct display with the wider pixels of the computer screen.)

Movies

You can display information for the following: playback time, image size (in pixels), bit rate and frame rate, audio CODEC, and video CODEC.

Photo Information tab

If the image captured is a still image, the device used to capture the image and the capture conditions (the Exif tab information) are displayed.

You can display the following: device information (the maker name and model of the camera used to capture the image), lens information (the minimum F number and the focal length), capture information (aperture, exposure compensation, shutter speed, light source, ISO, and whether the flash was on or off).

This product contains the software product of FUJIFILM "Exif Toolkit For Windows Ver. 2.3" (Copyright © 1998 FUJI PHOTO FILM CO., LTD.). Exif is the image file format standard for digital still cameras stipulated by JEIDA (Japan Electronic Industry Development Association).

Playing Back a Movie

You can play back movie slides in the Preview area.

Playing Back a Movie in the Original Size

- To open the <u>Playback window</u>, double-click the movie slide you want to play back (or click it once and select Play from the View menu).
- 2 Play back the movie.

To play back and pause the movie

(Playback/Pause button). If the movie is stopped or paused it starts to play back; if it is playing back, it pauses.

To rewind

Click (Rewind button) to rewind for a certain period of time. The movie rewinds as long as you hold the mouse button

To fast forward

Click (Fast Forward button) to fast forward for a certain period of time. The movie fast forwards as long as you hold the mouse button.

To play back and pause

Click (Pause) .
To close the Playback window, click (Close button). 3

You cannot open more than one Playback window at a time.

Movie Playback Window Click an area of the illustration below to display more information about that part of the screen.

Close Button Closes the Playback window.

Rewind ButtonRewinds the movie.
Click this button to rewind for a set period of time. The movie rewinds as long as you hold the mouse button.

Fast Forward Button
Fast forwards the movie.
Click this button to fast forward for a set period of time. The movie fast forwards as long as you hold the mouse.

Playback/Pause ButtonClick this button while the video is stopped and it starts to play back.
Click this button while the movie is playing back and it pauses.

Stop ButtonStops the movie.

Movie Playback AreaThe area where the movie appears.

Movie File Name

The name of the open movie.

Slider Indicates the current playback position. By dragging this slider to the left or right, you can change the movie playback position.

Playback Time DisplayDisplays the playback time elapsed and the total playback time of the movie.

Sorting Slides

You can sort slides in the Preview area by Name, File Type, Size, Creation Date, Last Modified Date, your own Custom sequence, or Reverse Order. Use one of the following methods to sort images:

- ->Select Sort from the View menu and select the order in which you want to sort the images from the pop-up menu.
- ->Drag an image to the desired position and release the mouse button.

🍟 Hint

If you select Descending from the pop-up menu, PictureGear™ reverses the current image order.

Note

Device folder slides cannot be sorted.

Arranging Slides

You can arrange slides in a square, by width, by height, or in a custom layout.

- **1** Select Arrange from the View menu.
- **2** Select a format from the pop-up menu.

Square

Slides are arranged in squares.

Fit to Width

Slides are displayed to fit the width of the Preview area.

Fit to Height

Slides are displayed to fit the height of the Preview area.

Custom

The Slide Settings dialog box appears and you can select the number of slides to be set to height and width. The slides in the Preview area are arranged and displayed.

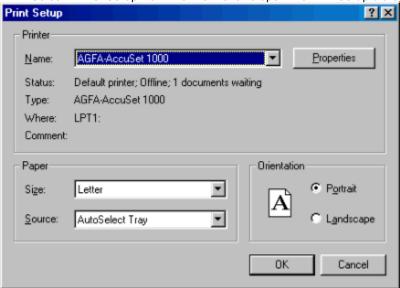

When setting the number of slides per row, you may not be able to arrange the slides as specified due to the number of slides in the selected folder.

Changing Page Setup

You can change the Page Setup from the Viewer window, the Main window, or when you start to print. The Page Setup remain active until you exit PictureGear™.

1 Select Printer Setup from the File menu to open the Print Setup dialog box.

- **2** Select any of the following printing options:
 - Name Select a different printer from the list.
 - Size Select the paper size from the list.
 - **Source -** Select the paper feed method from the list.
 - **Orientation** Select the Portrait or Landscape option button.
- 3 Click OK to confirm the settings and close the dialog box.

Printing the Viewer Image

Print images in <u>View</u> as follows:

- Double-click the image you want to print to open the Viewer window.
- Select Printer from the File menu, or click on the toolbar, to open the Page Setup dialog box.

 To print at the original size, select Print Original Size; to print at maximum size, select Fit To Page. Click OK to start printing. 2
- 3
- 4

Related topics Changing Page Setup Printing From the Main Window

Printing from the Main Window

You can print a single slide or a set of slides from the Main window.

- **1** Select the slides you want to print.
- 2 Select Print from the File menu, or click $\overset{\bullet}{V}$ on the toolbar, to open the Print dialog box.
- **3** Select a printing method.

Click Page Print or Index Print to select.

Use Page Print to print one slide per page.

Use Index Print to print a specified number of slides (number of columns x number of rows), each one on a separate page.

The print setting dialog box appears for the selected printing method.

4 Set the Print Conditions.

If you selected Page Print, click either Keep Original Size or Fit to Page.

If you selected Index print, adjust the following settings if necessary.

In Layout of images, you can specify the number of rows and columns of slides per page in katakana.

In Margins, you can specify print margins.

If you check Print Photo Date, you can print the date and time the still image or movie slide was taken, and if you check Print File Name, you can print the file name.

5 Click OK to start printing.

Previewing Printing

Before printing, you can preview the results on the screen.

- **1** <u>Select the image(s)</u> you want to preview.
- 2 Select Print Preview from the File menu to display a print preview.
- **3** Select Contact Sheet to print an index of the selected images in a grid, or select One Page Per Image to print each image on a separate page.
- 4 Click Settings to select the settings for the layout you selected in step 3.
 - -> If you selected Contact Sheet, check the Print Properties box to print the image information, enter the number of rows and columns you want per sheet, and enter numbers for the side, top and bottom margins.
 - -> If you selected One page per image, select Print Original Size or Fit To Page.
- 5 Click OK to accept the settings and close the dialog box.
- 6 Click OK to open the Print Preview window.
- **7** Do any of the following to view the images:
 - -> Click the Print button to print the images.
 - -> Click the Next Page or Prev Page buttons to display a different page of the document.
 - -> Click the Two Page button to display two pages at a time.
 - -> Click the Zoom In or Zoom Out buttons to zoom the print preview. Alternatively, point to the image on the preview screen, and then click the left mouse button to magnify the image.
- 8 Click Close to close the Print Preview window.

Saving Slides

You can save image files on a hard disk, floppy disk, or MO disk. There are two methods of saving image files. When saving on a floppy disk or MO disk, insert the disk and then follow the steps below.

Dragging an image to the destination folder

- 1 In the Preview area, <u>select the slide</u> you want to save.
- **2** Drag the slide to the location in the Folder list where you want to save the file and release the mouse button.

If you drag the image to a different folder on the same disk, the file moves to the destination folder. If you drag the image to a folder on a different disk, a copy of the file is placed in that folder.

Saving an image from the Viewer window

- 1 In the Preview area, double-click the image (still image) you want to save to display it in the Viewer window.
- 2 Select Save As from the File menu, to open the Save As dialog box.
- 3 Select the folder where you want to save the file in.
- **4** Enter the File name you want to assign to the image.
- **5** Select the file type from the Save as type list. You can choose from the following file formats: BMP, JPEG, TIFF, or GIF.
- 6 Click Save to save the image.

You can also save slides by making copies of them.

Converting Image File Formats

Two ways of converting image file formats are as follows:

You cannot change the format of movie slides.

Using the PictureGear Main Menu

- 1 In the Preview area, select the images you want to convert.
- 2 Move the mouse pointer to File Process in the File menu and select Still Format Conversion. The Still Format Conversion dialog box appears.
- **3** Place a check next to Output Format, then select a file format from the drop down file format list. You can select any of the following: BMP, TIFF, JPEG, GIF, DVF, or "MemoryStick".
- 4 Select Duplicate to make a copy of the original file, or select Replace to overwrite the existing file.

 When saving as a new file, input the name of the folder where you want to save the new file in the Folder.

 Click the Browse button to display the Browse for Folder dialog box and make the desired settings.

When saving images in MemoryStick format, be sure to enter folder and file names as specified for the devices with which the images on the MemoryStick are to be viewed. Failure to enter appropriate folder and file names will make it impossible to view the images. For folder and file names to be used with various types of MemoryStick devices, see the instructions that are provided with each device.

5 If necessary, set image size and rotation.

You can change any of the following settings by checking the setting you want to change.

Resize

- -> **Percentage to original Images** Select Percentage of Original Images and enter a value for the image ratio (in 1% units) in the spin box.
- -> **Fit Width to** Select Set Width in Pixels or Set Height in Pixels and enter the image height and width in pixels (one pixel units) in the spin box. When Set Height in Pixels is selected, you can only set the height.
- -> **Fit Height to** Select Set Width and Height in Pixels and enter the desired values (in one pixel units) in the spin box.

Rotate

Select the Rotate check box and select the image rotation angle.

6 Click OK to convert the file format and close the dialog box.

Using the Viewer window display File menu Save As item

1 In the display area of the Viewer window, double-click the slide you want to save.

The image appears in the Viewer window.

2 In the File menu, select Save As.

The Save As dialog box appears.

- 3 To change the folder in which you want to save the file, select from the Save in pull-down menu.
- 4 Enter the file name.
- **5** Select the file type (format) from the pull-down menu.

You can select any of the following: BMP, TIFF, JPEG, or GIF.

6 Click Save.

The file format is converted and the file saved.

Reading in Images from a MemoryStick

To read images saved on a "MemoryStick" into PictureGear™, click on the drive and the folder assigned to the "MemoryStick" in the Folder list.

Only images saved in "MemoryStick" format (file extension .JPG) can be read in from a "MemoryStick".

Related topics

Changing the image file format

Sending Images to a MemoryStick

Writing Images on a MemoryStick

When saving PictureGear™ images on a "MemoryStick", you must convert selected images to "MemoryStick" format (file extension .|PG).

Use the following procedure to write images on a "MemoryStick".

- Select the slides from the Sheet view.
- 2 Select File Process -- Still Format Conversion in the File menu.

The Still Format Conversion dialog box appears.

- 3 Select "MemoryStick" from the Output Format drop down file format list.
- 4 Input the drive name and folder name assigned to the "MemoryStick" in Folder drop down list.

When saving images in MemoryStick format, be sure to enter folder and file names as specified for the devices with which the images on the MemoryStick are to be viewed. Failure to enter appropriate folder and file names will make it impossible to view the images. For folder and file names to be used with various types of MemoryStick devices, see the instructions that are provided with each device.

5 Click OK.

This saves the images in "MemoryStick" format on the "MemoryStick."

Connecting and Setting the MS Serial Port Adaptor (MemoryStick Preparation)

Connecting the Sony MS Serial Port Adaptor to your PC allows you to load images saved on a "MemoryStick", and to save images displayed by PictureGear™ to the "MemoryStick."

- 1 Turn off the power to the MS Serial Port Adaptor and the PC.
- 2 Connect one end of the cable to a serial port on the PC, and the other end to the digital I/O port on the MS Serial Port Adaptor.
- 3 Install a "MemoryStick" into the slot on the MS Serial Port Adaptor.
- 4 Turn on the power to the MS Serial Port Adaptor. Refer to the Operating Manual of the MS Serial Port Adaptor.
- **5** Turn on the PC, and run PictureGear™.
- **6** In the Edit menu, select Various Settings -- Device Settings -- MS SerialPort Adaptor. The MS Serial Port Adaptor Settings dialog box appears.

7 Make the necessary settings, and click OK.

Select the Baud Rate that matches that set on the MS Serial Port Adaptor, and the Serial Port to which it is connected, and click OK.

The MS Serial Port Adaptor Settings dialog box closes.

About the Background Download Check Box

When this box is checked, after thumbnail images have been loaded for Preview display, actual images are loaded using background processing.

If the box is not checked, only thumbnail images are loaded in the Preview area. The actual image is loaded only when needed, such as for Viewer window operations.

When Background Download is Turned On

Until one actual image is completely read in, other actual images cannot be processed. It is recommended that you turn this option off when working with large images.

Because you cannot select an image in the Preview area that has not been loaded, you cannot use procedures such as drag and drop until the actual image is loaded. Display the desired image in Viewer window to load it as an actual image and manipulate it.

Related topics

Loading images from a MemorStick with an MS Serial Port Adaptor

Saving images to a MemorStick with an MS Serial Port Adaptor

Loading MemoryStick Images with the MS Serial Port Adaptor

To display PictureGear™ images that have been stored on a "MemoryStick", after confirming the connection between the MS Serial Port Adaptor and the PC, proceed as follows.

If the settings or connection port for the MS Serial Port Adaptor has been changed since the previous connection, select the settings and serial port again.

1 In the File menu, select Connect to Device -- MS Serial Port Adaptor.
In the device list, a child folder appears in the MS Serial Port Adaptor folder , and any images in that folder appear in the Preview area.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

2 You can execute slide operations such as Viewer window display.

🍟 Hint

Available operations depend on the Background Download selection in the Connection settings.

V Note

After loading data, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the MS Serial Port Adaptor off and on.
- -> Disconnecting and reconnecting the cables.
- -> Removing and reinserting a "MemoryStick."

V Note

After displaying images in the Preview area, you must wait a moment for data to load when performing a full-image operation such as Viewer window display.

The MS Serial Port Adaptor and PC communicate until all data has been loaded, so be careful not to remove the connection cable during communication.

If an error occurs, disconnect and reconnect the cable at the MS Serial Port Adaptor, and repeat the settings.

When you want to store (or copy) slides from the MS Serial Port Adapter folder to the PC's hard disk, drag the slides and drop them onto the target folder in the Folder list.

Saving Images to a MemoryStick with the MS Serial Port Adaptor

To save PictureGear™ images to a "MemoryStick", after confirming the connection between the MS Serial Port Adaptor and the PC, proceed as follows:

If the settings or connection port for the MS Serial Port Adaptor has been changed since the previous connection, select the settings and serial port again.

- 1 In the File menu, select Connect to device -- MS SerialPort Adaptor.

 Images contained in the MS Serial Port Adapter folder in the device list are displayed in the Preview area.
- **2** Drag slides from the Preview area to the MS Serial Port Adapter folder in the device list and release the mouse button.

Dragged slides are saved on the "MemoryStick"

Images can also be copied to the "MemoryStick" by dragging the image in the Explorer to the "MemoryStick" Preview area and releasing the mouse button.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

Note

After loading data, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the MS Serial Port Adaptor off and on.
- -> Disconnecting and reconnecting the cables.
- -> Removing and reinserting a "MemoryStick."

🦉 Note

Only still images can be saved.

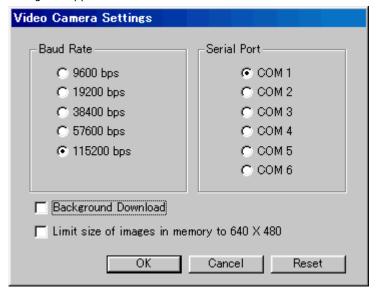

The MS Serial Port Adaptor and PC communicate until all data has been loaded, so be careful not to remove the connection cable during communication.

If an error occurs, disconnect and reconnect the cable at the MS Serial Port Adaptor, and repeat the settings.

Video Camera Connection and Settings

By connecting a Sony video camera to the PC, photographic images can be loaded from, and PictureGear™ images can be sent to the video camera.

- 1 Turn off the power to the video camera and the PC.
- 2 Connect one end of the cable to a serial port of the PC, and the other end to the digital I/O port on the video camera.
- **3** Turn on the video camera, and make the necessary settings to enable communications (set the power switch to memory, etc.).
 - Refer to the video camera operating manual for details.
- **4** Turn on the PC and run PictureGear™.
- 5 In the Edit menu, select Various Settings -- Device Settings -- VideoCamera. The Video Camera Settings dialog box appears.

6 Make the necessary settings, and click OK.

Select the Baud Rate that matches that set on the video camera and the Serial Port to which the video camera is connected, and click OK.

The Video Camera Settings dialog box closes.

Q.

About the Background Download Check Box

When this box is checked, after thumbnail images have been loaded for Preview display, actual images are loaded using background processing.

If the box is not checked, only thumbnail images are loaded in the Preview area. The actual image is loaded only when needed, such as for Viewer window operations.

¥ When Background Download is Turned On

Until one actual image is completely read in, other actual images cannot be processed. It is recommended that you turn this option off when working with large images.

Because you cannot select an image in the Preview area that has not been loaded, you cannot use procedures such as drag and drop until the actual image is loaded. Display the desired image in Viewer window to load it as an actual image and manipulate it.

Ϋ́Δ

About the Limit size of images in memory to 640 x 480 Check Box

When this box is checked, the size of images to be saved on "MemoryStick" will be limited to VGA size (640 \times 480 pixels).

Loading Images from a Video Camera

Sending Images to a Video Camera

Loading Images from a Video Camera

To display PictureGear™ photographic images from a Sony video camera, after confirming the connection between the camera and the PC, proceed as follows.

If the settings or connection port for the video camera has been changed since the previous connection, <u>select the settings and serial port again</u>.

In the File menu, select Connect to device -- VideoCamera.
 Images contained in the Video Camera folder in the device list are displayed in the Preview area.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

2 You can execute slide operations such as Viewer window display.

🖫 Note

After loading an image, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the Video Camera off and on.
- -> Disconnecting and reconnecting the cables.
- -> Removing and reinserting a "MemoryStick."

🍟 Note

After displaying an index of images, you need to wait a while for an image to load when performing full-image operations such as using the Viewer window.

The video camera and PC communicate until all images have been loaded, so be careful not to remove the connection cable during communication.

🍟 Hint

When you want to store (or copy) slides from the Video Camera folder to the PC's hard disk, drag the slides from the folder's Preview area and drop them in the target folder.

Sending Images to a Video Camera

To send PictureGear™ images to a video camera, after confirming the connection between the video camera and the PC, proceed as follows.

If the settings or connection port for the video camera has been changed since the previous connection, <u>select the settings and serial port again</u>.

- In the File menu, select Connect to device -- VideoCamera.

 Images contained in the Video Camera folder in the device list are displayed in the Preview area.
- **2** Drag the slides from the Preview area and drop them in the Video Camera folder **5** of the device list. Dragged images are sent to the video camera.

🗣 Hint

Images can also be copied to the video camera by dragging the image file in the Explorer to the Video Camera index of images and releasing the mouse button.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

🗣 Note

After loading an image, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the Video Camera off and on.
- -> Disconnecting and reconnecting the cables.
- -> Removing and reinserting a "MemoryStick."

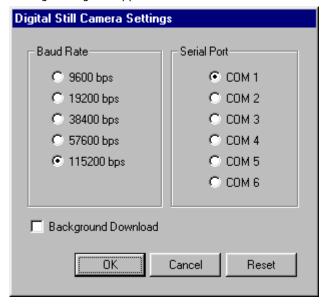

V Note

The video camera and PC communicate until all images have been loaded, so be careful not to remove the connection cable during communication.

Digital Still Camera (DSC-F55/F505) Connection and Settings

By connecting a Sony digital still camera (DSC-F55/F505) to the PC, photographic images can be loaded from, and PictureGear™ images can be sent to the digital still camera.

- 1 Turn off the power to the digital still camera and the PC.
- 2 Connect one end of the cable to a serial port of the PC, and the other end to the digital I/O port on the digital still camera.
- **3** Turn on the digital still camera, and make the necessary settings to enable communications (set the mode switch to Play, etc.).
 - Refer to the digital still camera operating manual for details.
- 4 Turn on the PC and run PictureGear™.
- 5 In the Edit menu, select Various Settings Device Settings -- Digital Still Camera. The Digital Still Camera Settings dialog box appears.

6 Make the necessary settings, and click OK.

Select the Baud Rate that matches that set on the digital still camera and the Serial Port to which the digital still camera is connected, and click OK.

The Digital Still Camera Settings dialog box closes.

About the Background Download Check Box

When this box is checked, after thumbnail images have been loaded for Preview display, actual images are loaded using background processing.

If the box is not checked, only thumbnail images are loaded in the Preview area. The actual image is loaded only when needed, such as for Viewer window operations.

¥ When Background Download is Turned On

Until one actual image is completely read in, other actual images cannot be processed. It is recommended that you turn this option off when working with large images.

Because you cannot select an image in the Preview area that has not been loaded, you cannot use procedures such as drag and drop until the actual image is loaded. Display the desired image in Viewer window to load it as an actual image and manipulate it.

Loading Images from a Sony Digital Still Camera (DSC-F55/F505) (Using Serial Communication)

To display PictureGear™ photographic images from a Sony Digital Still camera (DSC-F55/F505), after confirming the connection between the camera and the PC, proceed as follows.

If the DSC-F505 is connected to the PC by USB connection, load images by referring to the procedure for loading images from a MemoryStick.

If the communications settings for the digital still camera have been changed since the previous connection, <u>select</u> the settings and serial port again.

In the File menu, select Connect to device -- Digital Still Camera.

Folders such as the Still Image folder appear as child folders of the Digital Still Camera folder in the device list, and images in such folders are displayed in the Preview area.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

Y About the folders for Digital Still Camera (DSC-F55/F505)

The following folders are displayed as child folders of the Digital Still Camera folder . Clicking on a folder displays the images stored in that folder.

Still Image folder Movie folder E-mail folder

2 Perform the desired slide operation, such as Viewer window display.

🏆 Hint

Available operations depend on the Background Download selection in the Connection settings.

ϔ Note

After loading an image, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the digital still camera off and on.
- -> Disconnecting and reconnecting the cables.
- -> Taking new photos or deleting data in the camera.
- -> Removing and reinserting a "MemoryStick."

🍟 Note

After displaying an index of images, you need to wait a while for an image to load when performing full-image operations such as using the Viewer window.

The digital still camera and PC communicate until all images have been loaded, so be careful not to remove the connection cable or interrupt the infrared beam during communication.

🍟 Hint

When you want to store (or copy) slides from the digital still camera folder to the PC's hard disk, drag the slides and drop them onto the target folder in the Folder list.

Sending Images to a Sony Digital Still Camera (DSC-F55/F505) (Using Serial Communication)

To send PictureGear™ images to a Sony Digital Still Camera (DSC-F55/F505), after confirming the connection between the camera and the PC, proceed as follows.

🍟 Hint

If the DSC-F505 is connected to the PC by USB connection, load images by referring to the procedure for loading images from a MemoryStick.

😨 Note

If the communications settings for the digital still camera have been changed since the previous connection, <u>select</u> the settings and serial port again.

- 1 In the File menu, select Connect to device -- Digital Still Camera.

 The Still Image folder appears as a child folder of the Digital Still Camera folder in the device list, and images in the folder are displayed in the Preview area.
- **2** Drag an image from the Preview area to the Still Pictures in the device list, and release the mouse button. Dragged images are sent to the digital still camera.

🍟 Note

Only still pictures can be sent to the digital still camera. They are stored in the digital still camera's Still Picture Folder.

🍟 Hint

Images can also be copied to the digital still camera by dragging the image file in the Explorer to the Digital Still Camera Preview display and releasing the mouse button.

If a message appears indicating a communications failure, try reducing the transfer speed in the Connection settings.

🗣 Note

After loading an image, if one of the following actions are performed, step 1 must be performed again.

- -> Turning the digital still camera off and on.
- -> Disconnecting and reconnecting the cables.
- -> Taking new photos or deleting data in the camera.
- -> Removing and reinserting a "MemoryStick."

ϔ Note

Communication between the digital still camera and the PC continues until all images have been loaded. Do not disconnect the connection cable during communication.

Changing Slide Names

- **1** Select the slide whose name you want to change.
- 2 Select Rename from the File menu.
- 3 Enter the new slide name.

Attaching a Serial Number to Multiple Slides and Changing their Name

You can replace multiple file names with numbers.

For example, the file names Tortoiseshell cat, Siamese cat, and Persian cat can be replaced with Cat01, Cat02, and Cat03.

- **1** Select the slides you want to attach numbers to.
- 2 Select File Process -- Specify File Name and Duplicate from the File menu.

The Rename dialog box appears.

3 Specify the name change method.

Changing the name to an arbitrary character string plus original name

Check the Change File Name box, then select Original Name from the drop down menu and enter the arbitrary character string in the text box.

For example, if you enter "My" in the text box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become My Tortoiseshell cat, My Siamese cat, and My Persian cat.

Changing the name to an arbitrary character string plus number

Check the Change File Name box, then select Number from the drop down menu, enter the arbitrary character string in the text box, then enter the number of digits in the Serial digits spin box.

For example, if you enter "Cat" in the text box and the number 2 in the Serial digits spin box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become Cat01, Cat02, and Cat03.

4 Click OK.

The slide names change and the dialog box closes.

PictureGear™ Functions

With PictureGear™ Version 4.1 Lite, you can display and manage images saved on the PC's hard disk, floppy disk, PC card, or "MemoryStick," and can quickly display or play back file contents.

Displaying

Displays the slide(s) saved in the selected folder

If the slide's file format is PictureGear-compliant, you can simultaneously display the same slide in two different file formats. You can <u>copy and move</u> displayed slides, as well as sort them by Creation Date, Name, and so forth, and can <u>arrange</u> them in a specified format.

Displaying Single Slides

In the Preview area, you can display the desired slide at full size in another window.

Printing Slides

You can print the desired slide. You can also print multiple images viewed in the Preview area on the same page

Playing Back Movies

You can play back movies in MPEG1 and AVI formats.

Using with Other Devices

You can display data from the following devices when they are connected to the PC: "MemoryStick", MS Serial Port Adaptor, Sony Digital Still Camera (reading images from DSC-F55/F505) and Video Cameras. You can also send PictureGear data to each of the above devices.

Slides

Images that are displayed in PictureGear $\ensuremath{^{\text{\tiny TM}}}$ are called slides.

In the Preview area slide frame, a mark showing the contents of the slide is attached to the slide(s).

Still Image Slide

Movie Slide

Folder Slide

Tree View

This function displays images in Folder view and Device view.

Select a folder in one of the view areas to display that folder's images in the Preview area. To view a part of the image not displayed in the window, drag with the scrollbar.

Connecting to peripheral devices (Sony Video Camera, Sony Digital Still Camera DSC-F55/F505, and MS Serial Port Adaptor)
Folder icons for each device are displayed in the Device view, and data recorded on each device can be viewed the same as for images stored in folders on hard disks.

Copying and Moving Multiple Slides

Copying Multiple Slides

- Select the slide you want to copy.
- 2 Select File Process -- Specify File Name and Duplicate from the File menu to open the Rename dialog box.
- **3** Enter the Folder for the folder you saved the copied file in.
 - Click Browse, and you can specify the settings in the Browse for Folder dialog box.
- **4** To change the name of the slide, select one of the following two methods:

Changing the name to an arbitrary character string plus original name

Check the Change File Name box, then select Original Name from the drop down menu, and enter the arbitrary character string in the text box.

For example, if you enter "My" in the text box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become My Tortoiseshell cat, My Siamese cat, and My Persian cat.

Changing the name to an arbitrary character string plus number

Check the Change File Name box, then select Number from the drop down menu, enter the arbitrary character string in the text box, then enter the number of digits in the Serial digits spin box.

For example, if you enter "Cat" in the text box and the number 2 in the Serial digits spin box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become Cat01, Cat02, and Cat03.

5 Click OK.

The slide names change and the dialog box closes.

Moving Multiple Slides

- 1 Select the slide you want to move.
- 2 Select File Process -- Specify File Name and Move from the File menu to open the Rename dialog box.
- **3** Enter the Folder for the folder you saved the moved file in.
 - Click Browse, and you can specify the settings in the Browse for Folder dialog box.
- 4 To change the name of the slide, select one of the following two methods:

Changing the name to an arbitrary character string plus original name

Check the Change File Name box, then Select Original Name from the drop down menu, and enter the arbitrary character string in the text box.

For example, if you enter "My" in the text box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become My Tortoiseshell cat, My Siamese cat, and My Persian cat.

Changing the name to an arbitrary character string plus number

Select Number from the drop down menu, then enter the arbitrary character string in the text box, and enter the number of digits in the Serial digits spin box.

For example, if you enter "Cat" in the text box and the number 2 in the Serial digits spin box, the original file names Tortoiseshell cat, Siamese cat, and Persian cat become Cat01, Cat02, and Cat03.

5 Click OK.

The slide names change and the dialog box closes.

Slides

Slides are small images displayed in the PictureGear™ Preview area. Images that can be viewed in PictureGear™ are: still images and movies. However, movie slides are represented by one slide.

Creating Slide Names With Serial Numbers

You can change multiple slide names into serial numbers and arrange slides.

For example, you can change the slide names Tortoiseshell Cat, Siamese Cat, and Persian Cat to Cat01, Cat02, and Cat03.

- **1** Select the slide you want to attach serial numberss to.
- **2** Select File Process -- Specify File Name and Duplicate from the File menu.
 - The Rename dialog box appears.
- 3 Click Change File Name and select Number from the drop down menu. Enter the arbitrary character string in the text box and enter the number of digits in the serial number in the Serial digits spin box.
 - For example, the original slide names are Tortoiseshell Cat, Siamese Cat, and Persian Cat. If you enter Cat in the text box and 2 in the Serial digits spin box, the slide names become Cat01, Cat02, and Cat03.
- 4 Click OK.

Slide names are changed to the arbitrary character string plus serial number, and the dialog box closes.
