	A
1	CREATING CHARTS IN EXCEL
2	There are three type of files in Excel: A Worksheet file like this one, a
3	Macro Sheet file(which looks very much like a standard Worksheet but
4	operates in a different way), and a Chart file. A Chart file is a separate
5	Picture File that has active data links with its supporting Worksheet.
6	
7	To Create a Chart File (and solve the puzzle):
8	*First select the data you want to chart (A10 to AJ11)
9	* Pull down the File Menu and select New File
10	* When the dialog box opens, select Chart. Excel will attempt to
11	second guess you on how you want to graph the data and designate data
12	
13	you selected. To see the answer better, pull down the Gallery Menu,
14	select Line and choose the 2nd selection.
15	
16	To read from the Help Menu:
17	*Pull down the Help menu, select: Index
18	*Go to Commands and select File New and Chart Menu
