

Directions For Implementation:

Type
<shift>
<PrtSc>
for a
printout
of
directions

- (1) Do a File Retrieve to load worksheet into which you plan to insert this plan.
- (2) Important! Find an open area of your worksheet (must have at least 40 rows X 6 columns).
- (3) Perform a File/Combine/Copy/Named Range, using this worksheet and the Range named "POM".
- (4) Once entered in your worksheet, perform a Range Name Create on the upper left cell, the one which says "/xmP.O.M.~", and call it "\P" or whatever your preference is for it's Macro Name. Then type <alt>-P and see what happens.
