The following may be deleted from your actual working copy:

Hints and Limitations:
  * You must have added-in DOS.APP prior to running this MACRO.
  * The MACRO is invoked by invoking the USER (F7) key and then typing
    "SP" (No quotation marks).
  * This MACRO will invoke the Program Word Proof on text files created
    by Symphony.
  * This MACRO will handle spell checking using the entire Columns
    or specified ranges.
  * There SHOULD be no formulas in the "COLUMNS" or "RANGE" or they
    will be replaced by string values.

* This file can be Combined into any Symphony file but, should be
  placed where it won't over write a portion of the existing
  worksheet. The best way to combine this is to combine the range
  named "WMACRO".
* Drive A: must contain Word Proof (WORDPRF.EXE). I think the original
  program is named "WP.EXE" but I've renamed it due to having several
  wordprocessors in use. You should either rename Word Proof or fix
  this Macro.
* The macro will create a text file called TEMP.SPL you must make
  sure that the file is a new and unique name on the drive you
  specify.
* You may include a path name with the drive designation of the
  file. i.e. "B:" or "A:\Path\". The Macro will add the file
  name and extension of "TEMP.SPL". Note: This file is automatically
  deleted by the macro.
* This Macro will only handle label lengths of 240.
* Indentations or hard carriage returns will be replaced.

* Created by Jim Grettum, Fargo, ND. (CIS 71505,1130).
