

Problem A library of macro routines to be used in conjunction with 21 applications on same disk. Menu macros have been set up for calling up the different applications. The macro routines do things such as control cell pointer movement, erase cells, bounce around the worksheet, enable and disable cell protection, and execute range input commands to facilitate the entering of data. Series not totally polished but based on some great ideas.

Block Diagram

Tips Overall approach to maintaining common macro library that works in many different applications is notable.
