Problem   Generates a yearly of monthly amortization schedule based on
          loan amount, int rate, pymts per yr, and number of yrs.
          Will do up to 360 periods. Macros generate an excellent graph
          of resulting schedule showing breakdown of int and prin pymts.

Tips
          Macro that generates graph C29
          Build schedule macro A41
          Advanced formulas in C72..G73 including @PV formula.
          @PMT formula D60
