```
                    SOUNDS TERRIFIC II
                    ==================

                         Modules

                      ScreamTracker

                          IFF-1

                          IFF-2

                           WAV
```

   Sounds Terrific II Disc A contains large modules in the popular Protracker
format, S3M modules in the Scream Tracker format, IFF samples, WAV samples

These files can be auditioned from the AmigaGuide document on this CD. In
addition there are over 1,000 instruments in WAV and IFF formats and 100's
of Midi files.

Please note that constantly loading each module and listening to them in turn
will eventually fragment memory. You will need to reboot to clear this. In
addition some of these modules are very alrge and may not play on basic
machines. The modules are being played by HIPPO PLAYER .   Click >> HERE <<
to view the documentation for HIP.

The samples are being played with the excellent sample player called PLAY 16.
Click >> HERE << to view the documentation for this program.

Sid has also been included to allow you to view the contents of each
directory. To load SID please use the Assign icon first. Network CD owners
should use the NET-ASSIGN icon on their Amiga first.
