

Ice Demo

We at Ice Software would like to thank you for downloading our demo. This is only a 2 level demo that should give you a feel for the game.

Installing

To install the game to your c:\ drive, it must have 1 meg of free space. Also you must have about 4 megs of ram, although ram isn't the important thing here. Type "icedemo1 -d" to start the installation if you omit the -d you will not have a properly installed game. Depending on how the first 650k of ram is configured will depend if you will get an initial error message. You must have 500k free, if you are having errors make a boot disk, or run memmaker.

Command Line

You must enter command line commands to get sound, but this is good also, if your system crashes with the background midi you can shut it off easily.

- go No sound or music
- go sl Run the game with sounds
- go sl t Run the game with sounds and midi
- go sl t j Run the game with sounds, joystick, midi music
- go sl t j m Game with sounds, joystick, midi music and mouse
- go sl t j m g Same as above but with god mode ON

Keys to use in the game

- B To blow up a bomb
- S Set down an object
- Keypad 0 Jump
- Space bar Shoot
- 1 Jump kick
- 2 Goo Gun
- 3 Bomb
- 5 Mechine gun
- 7 Shotgun

F1 also has quick refrence.
