SPRO_630 is the new Hi-Tech Advisers Sales-Pro v.6.30a demo (dated September, 1993).  This demo is a complete Point-of-Sale, Inventory Control, and Accounting system that is designed to handle most aspects of any normal store operation.  This is a do-it-all program that allows you to manage your store, edit text files, manage normal file operations, run external programs, and much more.  It is a menu-oriented program (easy to learn and use), but also allows you to use GEM so that you can easily access many secondary program functions.  Color or mono. Docs included.  Hard Drive required.  It works on my TOS 1.62 machine and, I expect, the TT and Falcon as well (though I can't find out where that is said).  SPADD630 is a companion file to this program, that greatly expands its capabilities.  The file in this archive is a self-extracting compressed file.  Just double-click on it and select "EXTRACT" from the menu option.  Then using your item selector, tell the program where you wish the uncompressed files to reside.  That's it!
