

MINTUPGR is a HUGE set of files, so big that we aren't including them in our regular Suzy B's library but only on our two volume CD. This group of nine ZOO files will allow you to correctly and almost automatically set up MiNT and a slew of related utilities on your Hard Drive (use ZOO\_21\_4 in the UTILITY category to uncompress these ZOO files--DCXtract v.2.2b or 2.20c won't handle them correctly. Forget using this if you only have TOS 1.0 (UPGRADE!). Otherwise you will need an ST-Falcon with at least two meg of Free RAM and a HD partition with at least 9 meg free (and at least one meg free on a boot partition). Docs included. If you want to use MiNT install it using these files!
