Complete Overview	

1.2 About Shareware

Some Thoughts about Shareware

Note: By purchasing this CD-ROM, you have not acquired the rights of the programs stored on the disk. These still remain with the software authors.

If you find certain programs especially useful and therefore use them regularly, you are requested to pay the author of the software the so-called "Shareware fee". By supporting shareware authors, you also support future Amiga software development by talented independent software programmers.

Please read the documentation to the program in question to find out about the amount of money requested as the shareware fee.

If you like one or more of the demonstration versions of commercial

software, please consider buying the unrestricted full product. Please: Don't use a pirated copy. This would not only harm the development of new quality software; you would even risk your own data being destroyed by viruses or other mechanisms often distributed with illegal copies of commercial software.

Remember: A program worth using is worth buying -
Future software development depends on YOU!

1.3 What do I need to install ?

Does this CD-ROM have to be installed before use?

Basically: No. All files required to run a certain program are stored on the CD-ROM itself. However, there are cases (especially among the programs designed for the professional user) where a package requires separate installation.

Many program directories contain special installation programs which can easily be started with the mouse. You are advised to use these programs to ensure a proper installation of the accompanying software. Most of the programs, however, can be started by simply double-clicking on their icon.

To install a program which can directly be started onto your hard drive (e.g. for quicker access), simply drag its drawer from the CD-ROM into the desired destination drawer on your hard disk.

If a drawer contains a "Start Me First!"-file, it is required that you double-click this first before starting the actual program. This will allow the program to find the files it needs to run properly.

Should you experience startup-problems with a particular program, please click here.

This node also contains further information about the Setup-programs for the 'System Booster' Disk.
