Virus Info Base

1.1 Extreme

```
Name          : Extreme

Aliases       : No Aliases

Type/Size     : Boot/1024

Clone         : Zaccess 3, Primavera, Fat2

Symptoms      : No Symptoms

Discovered    : 14-08-91

Way to infect : Boot infection

Rating        : Dangerous

Kickstarts    : 1.2/1.3

Damage        : Overwrites boot/Destroys Disk(s).

Removal       : Install boot.

Comments      : The Extreme virus uses the kick vectors to
                stay resident in memory. To infect other disks
                the virus uses the DoIO()-Vector from the
                exec.library. When a special value reaches 0
                the virus start a quickformat routine and shows
                the following alert:

                THE EXTREME ANTI-VIRUS  HA HA !!!
                BACK TO LIVE BACK TO REALITY
                SICO DE MOEL  BERGERWEG 100  CALL 072-114816

                Click on this gadget to see a   Demo  of the Extreme
                virus. Push left mouse button to return.
