Chapter 1

Virus Info Base

1.1 Ultrafox

Name : UltraFox

Aliases : No Aliases

Type/Size : Boot/1024

Clone : No Clones

Symptoms : No Symptoms

Discovered : 03-04-91

Way to infect: Boot infection

Rating : Harmless

Kickstarts : 1.2/1.3/2.0

Damage : Overwrites boot.

Removal : Install boot.

Comments : The UltraFox-Virus is a very simple one. It just copy itself to address \$7EB00 and changes the cool vector to stay resident.

If you are making a reset the virus patches the DoIO()-Vector to infect other disks.

The special thing of that virus is the GFX-Routine which will be executed after every 15th infection:

"Greetings from UltraFox of Aust."

Click on this gadget to see a Demo of the Ultrafox virus. Click left mouse button to return.
