WinBatch 97d

Yksi merkittävimmistä Windows 95:n ja Windows NT:n puutteista on kunnollisen komentojonokielen puuttuminen. Toki Dos-Batteja voi ajaa Windowsistakin, mutta niiden avulla on turhan hankalaa käsitellä Windowsin objekteja (ohjelmia, ikkunoita, valikoita yms.).

Komentojonopuutetta helpottamaan saapuu WinBatch. Ohjelma on tehokas 32-bittinen Windowsinhallintasovellus. Jos bat-ohjelmoinnin hallitsee, saa WinBatchin avulla tehtyä Windows 95:ssä ja Windows NT:ssä melkein mitä tahansa.

Winbatch hallitsee toistorakenteet, muuttujat, DLL-linkit, MAPI- ja TAPI-protokollat, sekä omat itsekirjoitetut DLL-kirjastot. Kun ohjelman "batit" saa vielä käännettyä omiksi ajokelpoisiksi tiedostoiksi, on siitä vaikea löytää paljoa pahaa sanottavaa.

WinBatch on erinomainen ohjelma ja se tuntuu ratkaisevan Windowsin komentojonopulmat.

Windows 3.1:

Windows 95 / NT:
\ohjelmat\apuohjelmat\Winbatch\setup.exe

NetScan Tools 3.01a

NetScanTools sisältää yhteen ohjelmaan paketoituna kaikki tarvittavat TCP-IP-verkon ja Internetin skannaustoiminnot, kuten fingerin, pigin, tracerouten, lookupin, whoisin ja jopa kellojen sykronoinnin. Kaikki toiminnot ovat helposti valittavissa välilehdiltä. Ohjelmassa on myös pieni opetusosuus, joka opastaa nopeasti ohjelman käyttöön.

Varsin kätevä toiminto on Netscanner, joka tarkistaa jokaisen IP-osoitteen annetulla välillä ja halutessa selvittää myös koneiden nimet.

Desktop Surveillance 97

Desktop Surveillance
Omniquad Desktop Surveillance offers a unique approach to the problem of access control, prevention of, or investigation into, use/misuse of computer equipment and software. Instead of merely obstructing the user's actions, one of the oldest prevention methods known - the prospect of being watched and 'found out' - is applied. The program is the software equivalent of a surveillance camera and works by recording desktop activity. Yet it may operate in two modes; either by displaying warning signs in order to discourage misuse, or as secretly monitoring activity. While the application can store days of recordings, the settings can be tailored virtually for any situation. For example,

recording can be activated at certain chosen times only, when running specified applications or on log-on to the Internet. This program is the only tool available to address not only the issues of web browsing but also newsgroups and IRC at the same time. The program recording can be activated as soon as you visit certain WWW sites or specific IRC channels. Desktop Surveillance can also be remotely controlled, either via local network or the Internet, and in both cases it is possible to remotely observe activity on the local desktop in real time. The program can be applied in a manifold of situations - for example to discourage employees in your office from visiting certain WWW sites, doing anything else they are not supposed to do, or maybe to secretly find out what your PC is being used for in your absence.

Password 97

If you are looking for a simple way to stop people getting access to any Programs or Windows Environment Properties, then check out Password 97.

Password 97 is designed to allow Individuals or Network Administrators the ability to password protect the Windows Environment.

Password 97 gives you the owner the ability to protect individual windows items such as Display Properties, Network Neighborhood or Add and Remove Programs.

Password 97 will also let you protect programs such as Internet Explorer, Netscape, Money, Outlook the list is endless.

Password 97 Protects just about anything you want in to in Windows 95

How does it do this?

Well you see Password does not actually protect the program it protects the window / container that the program uses. As soon as password sees a registered protected window it hides the window so that the user can not use it and puts up a password box to receive verification to allow the users to use the window. If the user presses cancel then Password 97 shuts down the program and goes back into monitoring mode. If the user is registered the password frees up the window so the user can proceed.

What are some of the Major Features?.

This program was designed for Business / Educational use on a server or peer to peer network. It also has the ability to run in total stand alone mode which makes it ideal for home, work or portable machines.

It has 3 levels of security

> **Supervisor :**
> **System Administrator (Full access ability to create / delete Managers, Tempusers, protect programs and configure settings.**
> **Managers :**
> **Ideal for Section Managers / Lectures / Teachers or Bosses gives them the ability to free up certain protected programs so that other people can access them for a set period of time (ie Internet Explorer for 1hr).**
> **Temporary User :**
> **Receives access to the protected programs selected. There can be multiple users on at the one time and these can be created by the Manager / Supervisor in one easy step.**

You can protect just about every thing except the desktop and can unprotect individual items at will.

It is simple and easy to use with good protection against most avenues of by-passing the protection by unscrupless people. However this is not a program that claims to be unpassable but it will definitely give the average to experienced user quite a bit of difficulty and lost time trying to get around it.
If working off a network drive and and the user disconnects from the network then password continues it protection and will only allow the supervisor or manager access to the Protected programs.

Pelit

Blue Screen Saver 1.02

Windows NT:n pelottava tapa ilmoittaa vakavista virheistä on ns. Blue Screen. Blue Screen Saver - näytönsäästäjä emuloi tätä aitoa Blue Screeniä lähes täydellisesti. Kaikki tiedot, mitä ruudulla esitetään, kerätään siitä tietokoneesta, jossa näytönsäästää ajetaan, ja ovat siksi täysin aitoja. Blue Screen -vaiheen jälkeen kone "bootataan", jolloin näytönsäästäjä emuloi CHKDSK-ajoa, joka ilmoittaa tukusta virheitä. Ohjelma vilkuttaa tässä harmittomasti vaiheessa myös kiintolevyn valoa, jotta levyn tarkistus näyttäisi aidommalta.

Blue Screen Screen Saver vaatii normaaleista näytönsäästäjistä poiketen jonkin näppäimen painallusta hiiren liikuttamisen sijasta poistuaksesi ruudulta.

Tämä näytönsäästäjä on tehty toimimaan Windows NT 4.0:ssa, eikä siksi toimi Windows 95:ssä.

Grafiikka

Animagic

Animagic GIF Animator is an easy to use yet powerful GIF animation tool. It produces output files that are 10% to 80% smaller than non-optimized GIF's and builds animations from individual frames or from existing animated GIF's. Users can drag and drop files, easily

control loops, frame rate, transparent color, reduce number of colors, copy/cut/paste frames, add/delete comment frames, add effects and more. All of that can be done without any knowledge of GIF format (no need to know about graphic control blocks, extension blocks and other low level parameters). SMALLER file size = SHORTER download time

what other users say about Animagic GIF Animator

download 30 day evaluation version

register your copy online (secure server), phone, fax or mail

Main features:
- **Drag-and-drop** multiple frames or animation files from Windows Explorer.
- Set **frame rate** of all the frames at once (or repeat count of selected frames).
- Set **loop and transparent color** with a single mouse click.
- Use cumulative or **optimized global palette**, keep or merge local palettes.
- Get **optimized file size** using dirty rectangles, transparent mask and color reduction calculations.
- **Copy/Paste** images and **comments** to/from the clipboard.
- Add **transition effects**: fade-in, fade-out, dissolve, wipe, spiral, blind.
- Create **moving sprites** easily.
- Merge transparent animations with background.
- Hides GIF file structure.
- Reads GIF, PCX or BMP files.
- **HTML based help file** including screen shots, examples and tutorials.
