About Hangman

Hangman is a Windows version of the classic children's game. The game selects a random word from a user supplied list and challenges you to either guess what the word is by selecting its letters or be hanged by the neck. Hangman was designed to help students learn vocabulary words in a way that is hopefully entertaining as well as educational.

Distribution

Included with this version of Hangman should be the following files:

HANGMAN.EXE 118,928 bytes
HANGMAN.DAT 10,235 bytes
HANGMAN.HLP 15,853 bytes
HANGMAN.WRI 44,928 bytes

Shareware Notice

Hangman is distributed as shareware. It may be passed along freely, but if you use it please send a registration fee of $10 to the address below. In return I will send you a disk with the most recent version of Hangman and a list of over 10,000 words.
