Corey's DLT backup system

Asanté 10T Hub/12

FWB SledgeHammer
17400FMF 9GB RAID
system (main
storage)

Apple Workgroup
Server 8150

APS DLT20

APS HyperDAT

RAID is connected to server via FWB
JackHammer card

DLT and DAT are connected to server via
built-in SCSI interface
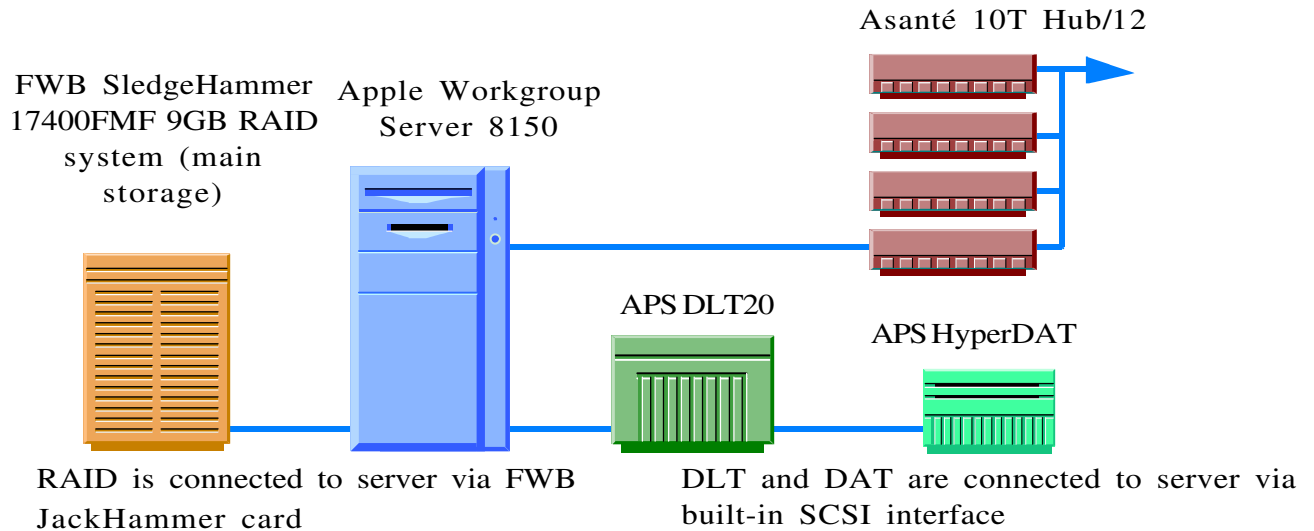

The file server's primary storage subsystem is the 9-Gbyte drive, set up as
Level 1, mirrored RAID. The DLT20 is the primary backup, with the
HyperDAT drive for redundant backup. The file server connects to a hub;
users back up data by storing files in personal folders on the server volumes.
