

MAKING WINDOWS NT A UNIVERSAL SERVER

Microsoft Windows NT can act as a nearly universal server for all kinds of clients: NetWare, Unix, Windows for Workgroups, and Windows NT. The NetWare Core Protocol (NCP) service for Windows NT is a newly announced Microsoft product.

The NetBIOS/NetBEUI combination and Server Message Block (SMB) are standard Microsoft networking services. IPX, originally Novell's networking protocol, is standard in Windows NT, as is AppleTalk.
