

PERFORMANCE DEGRADES AS CLIENT LOAD INCREASES

LAN-to-remote-PC file transfer via pcAnywhere Access Server 2.0

Bars indicate time needed to complete file transfer in minutes:seconds.

Remote-PC-to-LAN file transfer via pcAnywhere Access Server 2.0

*As a baseline in the LAN-to-remote-PC test, we transferred the file set from the network drive of our host pcAnywhere client to the hard drive of our local pcAnywhere client. For the remote-PC-to-LAN baseline, we transferred the file set from our local client to the host client's mapped network drive. **Only three out of the four workstations completed the test.
