

Lotus Notes

File Edit View Compose Text Tools Design Window Help

Composer Job From Local:SQL_Stage.Phones To Local:TEST.NSF (Active)

Data Definition Section

1. Select the tables/columns to be retrieved from the external database. Use the **where** and **value** fields to refine the selection of rows to be retrieved.
2. Enter the name of the Notes field (Keyword list) in which these values should be placed.

Select Statement: **SELECT city FROM Phones WHERE city = "SAN FRANCISCO"**
