

## NETWARE VLMs USING FPNW POST CLOSE PERFORMANCE TO WINDOWS NT DOS CLIENTS

For our file-server test, we used a dual 100MHz Pentium-based Compaq ProLiant 4000 with 128M bytes of RAM, a 10G-byte RAID subsystem, and four Compaq EISA Netflex 10BaseT Ethernet adapters.

We used the NetBench 4.0 disk-mix test on 60 clients in four network segments of 15 clients each.

We ran one test using the Novell NetWare VLM 1.2 DOS client loaded on each PC. In another test, we used Microsoft's Windows NT DOS client with the NWLINK IPX drivers.
