# CLIENT/SERVER INTEGRATION VIA APPLICATION BROKER

Three-tier systems

- PowerBuilder
- Delphi
- Visual Basic
- SQLWindows
- Access, Query, Excel, Word, . . .

Open Horizon's Connection Application Broker

Two-tier systems

- C, C++, COBOL, . . .
- Dynasty, Forte, USoft
- Encina, Tuxedo, Top End, . . .
- CORBA and OLE Objects
- Legacy applications

Open Horizon's Application Broker serves as a bridge between two-tier and three-tier architectures. The software lets users integrate applications built with client/server tools, such as PowerBuilder and Visual Basic, with server-based business rules, transaction-processing monitors, and legacy systems.
