===
    Section 1. General Program and Author Information.
===
Dear User:

This program can be used for quick overall project planning, activity
scheduling, and resource scheduling. You can assign income and costs
to events (tasks) and resources to estimate a project's income and
cost. You can define events that are tied to predecessors. For these
related events, start and end times are automatically calculated.

You can shift all events in a plan forward or backward in time. You
can define multiple calendars and use different calendars for each
resource. The program allows free-form drawing of events on a scale
of days, weeks, months, or years. On-line help and sample plans are
provided.

It will handle up to a few hundred events in a given plan, but it is
not suited for highly complex projects where thousands of tasks are
defined within a project plan.

This program requires Microsoft Windows 3.0 or 3.1 and a mouse (or a
equivalent pointing device). (NOTE: Subsequent releases will require
Microsoft Windows 3.1.)

Thank you for trying this program.

        Layton Fujii
        Sapphire Software Inc.

        Section 2. ASP Member
===

This program is produced by a member of the Association of Shareware
Professionals (ASP). ASP wants to make sure that the shareware
principle works for you. If you are unable to resolve a
shareware-related problem with an ASP member by contacting the member
directly, ASP may be able to help. The ASP Ombudsman can help you
resolve a dispute or problem with an ASP member, but does not provide
technical support for members' products. Please write to the ASP
Ombudsman at 545 Grover Road, Muskegon, MI 49442 or send a CompuServe
message via CompuServe Mail to ASP Ombudsman 70007,3536.

```
======================================================================
        Section 3.  Registration Requirements
======================================================================
```

This is a shareware program. If you find this program useful and find
that you are using it after a reasonable trial period, you must make a
registration payment to Sapphire Software Inc. To register, use the
program's "Registration" option in the "Help" menu or use the
"register.doc" file.

You are encouraged to pass a copy of this program (in its original form)
along to your friends for evaluation. Please encourage them to
register their copy if they find that they can use it.

```
======================================================================
        Section 4.  Description of Distributed Files.
======================================================================
```

1. Informational Files:
    file_id.diz - Program summary information for BBS.
    freeoffr.doc - Description of a free registration offer.
    readme.doc   - The file you are reading.
    release.doc - Information about the differences between this
                    version and the previous version.
    register.doc - Registration information. Information is also
                    provided in the "Registration" option of the
                    program's "Help" menu.
    vendor.doc   - Information for shareware vendors and BBS SYSOPs.

2. Required files for execution (may be placed in separate directory):
    aplanr.exe   - The program executable.
    aplanr.hlp   - On-line Windows help (not in text file format).

3. Sample data files (may be placed in separate directory):
    pvcal.dat   - Calendar definitions file with sample definitions.
    pvidx.dat   - Plan index file.
    pvrsc.dat   - Resource definitions file with sample definitions.
    pvyymmdd.sss - These are plan files that use the following naming
                    convention: yy = year, mm = month, dd = day,
                    sss = sequence number.

4. Windows Files:
    aplanr.ini   - This file is not distributed, but it is a Windows
                    initialization file that is automatically created and
                    maintained. It is located where Windows keeps its
                    other ".ini" type files.

```

```

Section 5. Installation and Getting Starting.
===
1. If upgrading from a previous version, refer to the RELEASE.DOC
    file.

2. To install from the standard distribution diskette received
    directly from Sapphire Software Inc.:
        a. Create a directory to place the program files. You
            may use the Windows File Manager or DOS. For example
            in DOS type:
                md c:\aplanr
        b. Copy all the program files from the diskette to the
            new directory. You may use the Window File Manager or
            DOS. For example in DOS type:
                copy a:*.* c:\aplanr

    [NOTE: The above only applies to diskettes received directly from
    Sapphire Software Inc. Files received from bulletin boards or
    Shareware vendors will typically be in compressed format.]

3. How to run the program:
    The program executable is named "APLANR.EXE". You may execute
    it directly with the Windows File manager.

    If you want to set up an icon in a program group to execute
    APLANR.EXE, refer to the Windows Users' Guides for the
    appropriate version:
        Windows 3.0: See Chapter 3 "Program Manager" in a section
                titled "Changing the Contents of Groups"
                near page 89.
        Windows 3.1: See Chapter 3 "Program Manager" in a section
                titled "Working with Program Items" near
                page 78.

    Use the directory that APLANR.EXE is located in as the path for
    the default directory.

4. Upon starting the program for the first time, review the on-line
    help information that is available from the program's "Help" menu.
    You may print any of the help sections.

5. Look at the sample plans, resource definitions, and calendar
    definitions that are provided.

6. Refer to the RELEASE.DOC file for additional information regarding
    the current release.

7. By default, all data resides in the same directory as the program
    executable. You may place your data in another location by doing
    the following:
        a. Create the directory you want to store the data in.
        b. Use the "Directories" option of the "Options" menu to tell
            the program to use this directory for all data.
