

Release Notes

SPRYNET

last updated 2/13/96

The following information is included in this file:

1. Applications in this release
2. New features
3. Installation and application notes

1. Applications in this release

=====

The following components are included in SPRYNET.

Mosaic 16 bit
SPRY Mail
SPRY Dialer
Internet Access Phonebook
Account Creation Utility
SPRYNET Help

2. New features in this release

=====

SPRY Mosaic

- * SSL Security
- * Table support
- * Clicking on the right mouse button produces a menu of frequently used options.
- * Includes extensively updated online help.

SPRY Mail

- * Supports MIME for attaching and receiving binary files, like word processing and graphics files.
- * Includes a spell checker that uses the dictionaries from Microsoft Word or Microsoft Office.
- * Return receipt feature allows you to receive acknowledgement that your mail message has been received.
- * Can automatically save copies of messages you've sent.
- * Several methods of message notification are available.

SPRY Dialer

- * Now includes support for multiple dialer profiles, allowing you to store several different SPRYNET Dialer configurations.

3. Installation & application notes

=====

Mosaic

If you are upgrading from Mosaic In A Box 1.0 or Mosaic In A Box 2.0, you may see the message "The Hotlist you selected is already loaded." This will only happen the first time you open Mosaic; click OK, and Mosaic will open successfully. After the first launch, Mosaic will open without

producing this error message.

In this 16 bit version of Mosaic, the Quick menu and the Hyperlink menu's "Create Shortcut" option is dimmed. This is a feature of the Windows 95 operating system and is not supported by Windows 3.1 or Windows for Workgroups.

SPRY Mail

Long file names are not supported in SPRY Mail. You will need to use the standard DOS format (eight or fewer characters followed by a period and a three character extension: **filename.ext**).

SPRY Mail will regularly synchronize your mail folders. Depending on the size of your folders and the number of mail messages you have, this may take some time to complete; please be patient and allow the folder synchronization to complete.

SPRY Mail, when receiving messages with attachments, will attempt to display the attachments as icons in the Mail attachment window. Depending on the mailer the message was sent from, some attachments may not be displayed as icons, but will display as "garbage" text in the body of the message. You can read these attachments by saving the messages to files and using the appropriate utility program to decode them.

SPRYNET.HLP

If you're running Windows NT 3.1 or 3.5, the Mosaic In A Box Help icon displayed in the Program Manager will not work. You can open the .HLP files for each SPRY application from the application or by clicking the help file names in the File Manager. The Help file runs properly from Windows NT 3.51, and Windows 3.x.
