Presentation

To avoid a simple disk crash (this may happen) or Windows bug (this will happen) changing your life into a nightmare, you should think to save (backup) frequently your most important files.

LeBackup allows you to save these files after they have been modified. This is done in background, as you are working.

To save your files, you must run a save **procedure**.

A **procedure** is defined by:

- A procedure name..
- A destination directory: X:\DIR1\... or \\PC_NAME\...
- One or more **command(s)** which describes the save actions.

Each **command is defined by:**

- A source directory.
- Some saving options: Save all the sub-directories, Save only the modified file (which have the attribute *archive* set on).

When the procedure has been defined, the save can be started: **LeBackup** runs in background, without decreasing your system's performance.

For all the files backed up, **LeBackup** reset the *archive* attribute.

During the save processing, **LeBackup** notes all the files it has not been able to copy (files busy for example).

When the save has finished, **LeBackup** informs you about the files it could not save.

FREE LICENSE

LeBackup32 Light is **Freeware**: It may be freely used for any purpose.

You may distribute it to anyone, and you may place it on any archive or bulletin board system for wider access. You may not charge anyone for it other than a reasonable fee to cover your distribution costs.

You must not include **LeBackup** as part of a commercial product.

LeBackup32 Light is supplied on an *as-is* basis. The author offers no warranty of its fitness for any purpose whatsoever, and accepts no liability whatsoever for any loss or damage incurred by its use.

LeBackup32 Light is not a supported product. The author accepts no commitment or liability to address any problems that may be encountered in using it.

Think to indicate if you want to register the 16bits or 32bits version of **LeBackup Light**.

You will receive a software key allowing you to run **LeBackup Light** in registered mode.

Save

The save procedure is ready to start.

Enter options:

Save all files: All the files will be saved, even if defined, regardless of the option defined in the different commands.

Do not copy files: Simulate the saving of the files (they will not be copied into the destination directory).

Create/modify command

Command definition:

Source directory: The directory containing the files to be copied.

Save sub-directories Save the files stored in all the sub-directories.

Save only modified files: Save only the files which have the Archive attribute set (which have been modified since the last save).

Create/modify procedure

Procedure definition:

Procedure name

Destination directory: X:\DIR1\... or \\PC_NAME\...

Commands included in the procedure. Use *Modify*, *Add*, and *Delete* button to define the command list.

Parameter file: Access error

An error occurred while accessing the parameter file named **LEBACKUP.PAR**. You may have to delete it from the **LeBackup** directory.
