

John's WordPerfect Tip o' the Day

Posts an alert with a random choice of one of up to 98 user-definable tips.

For best results, add this line to your OnStartUp macro:

```
Run ("Tip o' the Day")
```

to get a tip every time you start WP. If you don't have an OnStartUp, create one, naming it exactly that. Add the one line of code.

Edit tips in the macro code. It's easy to do.

For the technically inclined: this macro demonstrates use of more than 50 local variables in a macro, realization of an integer within a certain range from the random generator, and the use of two case commands with one variable, where one would exceed the maximum command length of 512 bytes.

Enjoy,
John Rethorst
