3allam wa tajalla,
wa da2rat alhandasyat 3an qodorateh tatahaka.

3alema albashar alhesabat almeqyasya,
lehandasa aldwa2ereya,

Amma 3an,
3elm almota3athem,
3lmoho nehayat kol altraqom.

by Mohamed Ghanem

Comment:

The problem of transliterating (not translating) the Arabic letters into English is that with each Arabic letter comes a vowel sign indicating the continuation of the current letter while pronouncing the next letter of the word. So in transliteration, an Arabic letter may be represented by one or more English letters.

"2" : the letter "HAMZA" which is a form of the several forms that belong to the first letter in the Arabic alphabet which is called "Aleph".

"3" : the letter "AIN" which is the 18th letter in the alphabet.

Translation:

It is He Who Has taught, and manifested His glory,
and the geometric circle about His abilities speaks.
The humans know the calculated measurements,
of the geometry of circles,
while His great knowledge,
is knowing the endings of all digits.
