IconBox 1.0 for Mac OS X
© 2003 ChickenByte

What is IconBox?

IconBox is an iPhoto™ like application that helps you store and manage your icons. It allows you to browse through your collection of icons using libraries, preview the icons at any size and export them with the click of a button. IconBox also allows you to search for your favorite icons by name.

Main features

- Organize your icons using libraries
- Search for specific keywords
- Export an icon as .tiff file
- Import single icons or a complete folder
- Jump to a specific icon in the finder
- Preview icons at any size
- The smart favorites library recognizes all the icons you labeled as "favorite"
- Copy an icon to the clipboard
- Set an icon as custom icon for another file

Installing IconBox

To install IconBox simply drag the IconBox application icon from the disk image to your applications folder or any other folder of choice. Double-click the IconBox icon to launch the application.

Minimum system requirements

Mac OS X.0 or higher
Lot's of icons!

Demo limitations

The unregistered version of IconBox allows you to create up to 3 libraries from which you can select the first 20 icons.
You can register IconBox for only $12.95 :
