

RapidWeaver FAQ

Q How do I create a website with more than one page?

A Take a look at the QuickStart section in the help window.

Q Why can't I see any themes?

A It may be because this is the first time you have launched RapidWeaver, quit and relaunch it again, you should now be able to see all the themes.

Q Why do some graphics not render properly on my PC browser?

A Some themes in RapidWeaver use transparent PNG's, not all browsers on the PC can render these properly. If PC compatibility is essential to your site make sure you test it on a PC first.

Q Can I create my own templates?

A Yes, take a look at the Template Design SDK in the help window.

Q Can I download more free templates?

A Yes, we have created a forum at our website where people can download and post RapidWeaver templates:

<http://www.realmacsoftware.com/support/viewforum.php?f=15>

Q Where do I put downloaded templates?

A New templates should be put into your home directory at Library/Application Support/RapidWeaver
