

# RapidWeaver Welcome

## **About RapidWeaver**

You know them when you see them.

Bland pages, crammed with artistic "extravagance," like the animated flame .gif, or spinning chrome-plated "@" and "HOME" symbols. Static backgrounds with colored 12-point Times New Roman scrolling before it. And then the embedded MIDI starts to play Muzak's version of The Who, on endless loop.

This is a "free" homepage.

All free homepages look like this . . . right?

Wrong.

Most are assembled from "Made in 1997" bits of HTML, placed there by now-defunct web companies. Most . . . but not all. There is a new program that is changing the look -- and the meaning -- of "free homepage". It's called RapidWeaver.

Practically all "simple" web-page-makers are clunky and overburden the novice user with paragraphs of incomprehensible HTML, overwhelming any attempts at creativity. RapidWeaver, on the other hand, is designed FROM SCRATCH to be as easy as possible, and more than that -- requires not even the vaguest understanding of HTML. When building a page in RapidWeaver, no direct HTML editing will EVER be required\*. It's that easy.

If you're someone who's saying, "But where do I start?" -- Worry not! RapidWeaver comes FULLY EQUIPPED with nearly 30 pre-fabricated website templates, serving as inspiration for your personal masterpiece.

RapidWeaver ensures both originality and convenience -- even if you're a heavily seasoned website maestro, this program will prove useful: on every level.

It's time to put YOU back in control of your website's quality.
