

RapidWeaver Tips & Tricks

Tip: HTML in the Content Field

HTML can be placed in the any of the content fields. it could be as simple as some bold tags or as complex as a form or table layout.

Tip: View online Images

You can view online images right in your web design by simply placing standard html like this in your body content field: ``

Tip: More themes can be downloaded from the RapidWeaver forum

Go to: <http://www.realmacsoftware.com/support/viewforum.php?f=15>

Tip: Altering the text in your page

The text within RapidWeaver webpages is controlled by a sytle sheet. If you want to alter the colour size or font once the page is built look in the resources folder and edit the file called "styles.css"
