

- **Users running the English version of SD2 do not need to use any of these scripts.**
- **Users running Panther (Mac OS 10.3) do not need to use any of these scripts.**
- **You will need Administrator rights in order to properly install your localized version of Speed Download 2.**

Due a bug in Mac OS X's carbon environment, you will need to run the script for the localized version you wish to use in order to for things to run as they should.

For example, if you wish to use the Deutsch version of Speed Download 2, here is what you do:

- Log into Mac OS X (German environment).
- Make sure that Speed Download 2 is quit.
- Go into the 'Localized Scripts' folder and run the 'German.command' script.

This will launch Terminal, and you will be prompted to enter your 'Administrator password'.

Once you successfully do that, simply quit Terminal and launch Speed Download 2.
