

Read This Section First

Code2wd6.Dot is a macro template that inserts an existing Visual Basic form or code module into a blank Microsoft Word Version 6.0 document. The module is then reformatted for better screen and printed output. Code2wd6.Dot uses color and styles to highlight procedures, declaring variables, control structures and comments.

This template is completely functional with no annoying shareware gimmicks. We would like you to register the product, but only if the template provides software value. We do concede that the licensed version provides a more detailed Help module (explained under Benefits of Registration).

Installation

To copy Code2wd6.Dot and Code2wd6.Hlp to your default template directory, double-click on the hard disk below:

Helpful Hints

- To use the template, choose the New command from the File Menu and select Code2wd6.
- The first time you use the macro, a Dialog Box will ask you to Create Code2wd6.ini. This initialization file contains the Styles used by the macro for formatting your Visual Basic code. The macro will cycle through the control structures and ask you to select an appropriate setting (i.e. Font, Color, Size, Bold, Italic etc.). These settings will be written to the Code2wd6.ini file in your default windows directory.
- Once the initialization process is complete, a blank document will be opened and a dialog box will appear asking you to choose the form or code module to insert into the document. You can load the code (must be text-based, not binary) from any directory or drive on your system. Code2wd6 will then go to work. The time to reformat the document is highly dependent on the size of the form or code module.
- A Word is replacing message appears in the status bar while the document is reformatting. None of your original code is affected. This template only changes screen and printer output.
- Setting the fonts to different colors is highly recommended.
- If you use a keyword within a message box statement or within message variables, the template may highlight it.
- If the setup procedure above does not work for some reason, manually copy Code2wd6.Dot and Code2wd6.Hlp to your default template directory.
- We hope that you find this template to be useful. Please feel free to comment by E-Mail to Robert R. Jacques c/o Compuserve 71610,1255 or c/o Internet 71610.1255@compuserve.com.

Benefits of Registration

Code2wd6.Dot and all associated files are Shareware. If you use Code2wd6.Dot regularly and find it to be of value, please use the Registration Form to receive the licensed version of the software.

With registration you will receive the [Adapting the Macro to other Structures/Languages](#) section of the help module. It explains how to adapt the macro to your own programming style, how to add additional structures, and how to use the macro for other programming languages.

Copyright
