Description

The VB Code Assistant is a program designed to assist Visual BASIC programmers. It contains a Code Gallery which is a database for holding Program Code Snippets. It has a Projects Database for keeping track of programming projects. It has a Versions Database which is used to track program changes. The Versions database can also generate reports. It has a Message Box and Input Box builder. You fill in the blanks and it builds the program code and then pastes the code to the Clip Board and into the Code Editor. The Code Templates area generates code for common items such as IF/THEN statements. It has a Viewer for viewing Bitmaps and Icons. When you click on the picture it is immediately pasted to the clipboard. The Code Editor can be used for editing small pieces of code.

Ordering

See the Help|Registration Menu item.

Installation

Copy the Setup.Exe file to any directory or diskette. From Program Manager's File Menu, select run and run the the Setup.exe file. Setup.exe will completely install the program.
