IMEX - Import/Export Ole Server

Thank you for supporting Shareware!

Release Notes

Installation

After completion of the IMEX Server installation program you need to check that you have the correct support files listed in the Installation Topic of the IMEX.HLP Help File which should have installed into your Windows directory.

If you find that you do not already possess some of the support files listed, then you would require the file 'IMEXSUPP.ZIP which can be obtained by connecting to CompuServe and and in the MSBASIC Forum search for the filename to download. Once you have this file simply unzip the file into your Windows System directory.

The support file 'IMEXSUPP.ZIP' contains all the necessary .DLL's to connect to ODBC and other external databases.

If you have any problems please contact us at: C.I.S. 100074,533. Please state clearly any problems you may have and what you databases you are using and we will return any queries as soon as humaly possible.

The Authors

Solugistics Ltd. are peace loving solution providers committed to producing high quality products that save users and programmers alike hours of repetition and unnecessary over head. Your end product should benefit from the stability and technology implanted in the IMEX range of Ole Servers and Classes. This little missive gives us, the authors, an opportunity to ask you for any feed back *(positve or negative - expletives not welcomed!)* that you would like to share with us.

Registration

To Register the IMEX Ole Server simply connect to CompuServe, Go 'SWREG', details on how to register are explained in this Forum. Our SWREG number is: **8760**

Shareware

This is a Shareware product. and therefore it is not Free. By registering any Shareware product it helps authors to further enhance their products, and in the long term the cash helps the Author to help you.
