

License Utility User's Guide

Welcome.... to the [License Utility User's Guide](#). It is written to teach you how to use the Solution Studios License Utility.

Contents

[Getting Started](#) explains how to begin using the License Utility.

[License Utility Reference](#) gives you detailed information on the License Utility Dialog Boxes.

Getting Started

Getting Started

The License Utility is the application that allows you to view and update your Solution Studios product licenses. To use the utility, double-click on the "License Utility" icon in one of your Solution Studios program groups. (The executable file is sflicens\bin\luviewer.exe.)

View a License

To view a product license, select the product name from the list box. The [License Utility](#) will then read and display your software license for that product.

Update a License

To update a product license, press the "Update" button and complete the [Update Dialog Box](#) that is displayed. You must include a license manager and license number to successfully update a license.

License Utility Reference

License Utility Reference

The License Utility is used to view and update your Solution Studios product licenses. The Viewer Dialog Box shown below is the window that is displayed when the License Viewer is started. To view a particular license, select the product from the product list box. The License Utility will then read and display the license.

Solution Studios License Viewer

Product: Log Window
