What ToolTips can do for your application...

- **Your users won't ask you, "What does that button do?"...**

- **Your software will become 'Dummy' proof...**

- **Tooltips can add that professional touch to your software as if it were made by that software giant...**

- **Let's face it....if you are like me, it's not worth your time to reproduce it since it's only $24.00.   Not unless you work for a few bucks an hour!**

Basic Features of ToolTips...

- **Uses only a portion of your control's .TAG property...**
  Simply add: TT:[tip text]   ...to your .TAG property and you can still use your .TAG property for other things as well.

- **Works with MDI Parent & Child forms...**

- **You need only add a single line of code to your StartUp Procedure...**
  Load frmToolTip

Features That Set Ours Apart From the Others...

- **Unlike other tooltips, ours works with forms that don't have focus...**

- **Most of the tooltips that are available are .VBX controls or .DLL's that aren't only expensive, but are 70K+ in size and let's face it...that's just another .VBX that you have to distribute and .VBX's aren't as fast as PURE SOURCE CODE and that is exactly what ours is!!!   100% Visual Basic Source Code and YOU get it!!!   Best of all, it is only 7K in size!!!**

- **You can select the BackColor, ForeColor, FontBold, and FontItalic properties by simply adding (BC:n/FC:n/FS:a) to your .TAG property.**
  BC: BackColor where n is equal to one of the following...
              Y=Yellow (Default)
              G=Green
              A=Aqua
              &H######   or supply your own 256 color Hex value
  FC: ForeColor where n is equal to one of the following...
              0=Black (Default)
              B=Blue
              R=Red
              G=Green
              &H######   or supply your own 256 color Hex value
  FS: FontStyle where a is equal to one of the following...
              B=Bold
              I=Italic
              X=Both Bold & Italic
                =or simply leave it blank for Non-Bold/Non-Italic text (Default)

- **Isn't it odd that all of Microsoft's applications have tooltips that will disappear after displaying for a few seconds, yet all of the .VBX controls and .DLL's don't have this "Feature"? Yeah, you guessed it...ours does!**
  MaxTipTime=0   Don't turn off
  MaxTipTime=50   About 5 seconds (Hey, you control it - just the way it should be!)

✔

You decide if you want it to be Multi-Line or not!

MultiLine=True/False

A Special Bonus!!!

Receive DDD Standard ToolKit v2.0 FREE!!!   This is how we did all of our 3D effects in the demo!   This 8K DDD.BAS module allows us to discard the 68K THREED.VBX headache!   This too, is 100% PURE VISUAL BASIC SOURCE CODE and can make any control 3D!   Not even THREED.VBX can do that!
This normally sells on CompuServe separately for $17.00.

By Telephone

Register with your Discover, MasterCard, or Visa...

Dial 1-800-484-1926 ext. 4513

You'll receive the password to unlock the CODE.ZIP right over the telephone.

Through September 30, 1995, receive a 5% discount when you register by Credit Card over the telephone.   We are conducting a survey to evaluate the effectiveness of having a Toll-Free number and Credit Card processing.
