

DBPush

Description The DBPush push button control emulates the 3D Command Button control supplied with Visual Basic Professional Edition 3.0. In addition it supports several enhancements of that control. One feature, which isn't connected to any property, is the ability to display several lines of caption text. If the caption text doesn't fit on one line (or if it contains CRLF breaks) it is automatically wrapped onto several lines.

File Name DBPUSH.VBX

Object Type DBPush

Remarks This document describes only the properties where *DBPush* differs from the 3D Command Button control.

About This control was developed by Dan Byström. For more information, contact me at: "dan.bystrom@adb-partner.it-invest.se". Swedish users may try to reach me at phone: 0708-68 65 78. I would be happy to discuss development of customized VBX'es (or OCX'es) for you.

Distribution You have the right to do whatever you want with the VBX, *as long as you don't attempt to modify any of it's code*. When the control is loaded in design mode a message is displayed. *This message may not be removed or changed in any way*. Anyway, the message won't appear at run-time.

Alignment Property

Description Determines the alignment of the caption text within the push button.

Remarks The Alignment property settings are:

Setting	Description
0	The caption text appears left-justified.
1	The caption text appears right-justified.
2	(Default) The caption text appears (horizontally) centered.

Data Type Integer (enumerated)

AutoSize Property

Description Not implemented.

BackColor Property

Description Determines the background color of the button.

Remarks It is set to light gray by default and it probably looks best that way.

Data Type Long

BackColorDown Property

Description Determines the background color of the button when the button is depressed.

Remarks It is set to light gray by default and it probably looks best that way.

Data Type Long

Enabled Property

Description Determines whether the control is enabled or not.

Remarks The caption text is *not* grayed when the control is disabled. To mimic graying you may try to change the *ForeColor* property at the same time as enabling/disabling the control.

Data Type Integer (Boolean)

PictureDown Property

Description Determines the picture to be displayed when the button is depressed.

Remarks If no picture is assigned to this property the *Picture* property is used for the depressed button as well.

Data Type Picture

Placement Property

Description Determines the placement of the picture with respect to the caption text.

Remarks The Placement property settings are:

Setting	Description
0	(Default) The picture appears horizontally centered at the top of the button and the caption text appears at the bottom, aligned according to the <i>Alignment</i> property.
1	The picture appears vertically centered at the right of the button and the caption text appears vertically centered to the left of the picture.
2	The picture appears horizontally centered at the bottom of the button and the caption text appears at the top, aligned according to the <i>Alignment</i> property.
3	The picture appears vertically centered at the left of the button and the caption text appears vertically centered to the right of the picture.

Data Type Integer (enumerated)

RoundedCorners Property

Description Not implemented.
