

Ceiling Fans

A paddle fan with a light fixture serves multiple purposes. It provides overall lighting for a room, and the fan keeps you cool on hot days. It also helps to circulate warm air during the wintertime. Ceiling fans are an especially effective way to circulate heat from a wood stove.

Paddle fans are an obvious choice for kitchens, but consider them for living rooms, family rooms and bedrooms too. If you have a cathedral ceiling, install a ceiling fan to circulate warm air that accumulates at the apex. Look for a variable-speed model.
