Top Secret Cars

by Chad Reichle

Well, here it is! The release version of Top Secret Cars, an automobile database created for use with TSR's excellent but no-longer-produced Top Secret S.I. role-playing game. Remember, since this program was written with Asymetrix's Toolbook, you will need Microsoft Windows 3.x, 2 Mb or more of RAM, and the Toolbook Runtime, available from many BBS's and disk libraries.

The stats for over 115 cars are included, from econo-boxes to minivans to 4-wheel-drives to Supercars, providing a full range of performance and price. If you can't find the car you need, there'll surely be an equivalent from which you can draw stats. If you need an indy car's performance stats, check out the McLaren F1 or Yamaha OX-99v. If you need the stats for the Corvette ZR-1, it's in there!

Enjoy using this program, and feel free to add your own designs or favorite vehicles. Use the examples and equations given to translate real-world terms to game terms.

This program is freeware, which means that you don't have to pay for it to use it, but I retain copyright rights. You may not modify it in any way except by adding, modifying or deleting records. You may distribute the original archive to your friends. Feel free to give a copy with added vehicle to friends as well.

Keep an eye out for these (hopefully) up coming releases:

- Shadowrun Guns
- Magical Mythical Martial Aids (That's weapons, and get your mind out of the gutter.)
- Magical Mythical Item Catalogue
- Magical Mythical Spell Catalogue
- Ye Olde and Ancient Bookstore
