WinModem-Plus

Version 1.00

DESCRIPTION AND AUTHOR INFORMATION

Short Description

WinModem-Plus lets you "see" what your internal modem is doing. Version 1 features SMART SENSE logic to simplify configuration and a new look and feel. See why Windows Magazine, Computer Shopper, and PC World called WinModem a "must have" for Windows users that use the serial port. Useful for other purposes, too. \$15.00 Registration fee.

Long Description

WinModem-Plus is a small Windows application that acts as a simple monitor of your internal modem. The big disadvantage to internal modems is that they lack status lights. Graphically, WinModem-Plus returns those lights without taking up any desk space. You can tell if your modem is functioning; no more guesswork. And new SMART SENSE logic detects which port is in use automatically, simplifying setup.

Even if you have an external modem, WinModem-Plus may be for you. Watching those lights dance can be intriguing. But that box does take up precious space. Move your external modem off your desktop, and use WinModem-Plus instead.

And since WinModem-Plus really watches the serial port, you can still use it, even if you don't have a modem at all. While WinModem-Plus can't let you peek at data, it can tell you if data is flowing.

Registration Information

Registration is inexpensive and easy. Use WinModem-Plus for 60 days. If you are satisfied with its operation, you must pay the \$15.00 registration fee (multiple-use site licenses are available).

Registered users receive the latest version of WinModem without the registration reminder screen, low-cost updates, notification of new updates, and free telephone support.

For complete user registration information please refer to the REGISTER.WRI text file.
