

There are always as many vanishing points as directions of sides - <sup>that</sup> an octagon tower would have four - but I can't explain how you find them from the plan without more

writing than I'm able for - but there are <sup>only</sup> two for all square objects - or square hollowed ones - For your courtyard overpage this would be the construction.

- a b c d your picture and all the lines go to one or other V.

V1

I sent you some fast bits of paint and pencil; for hints you are able now to use body colour on a duck ground and its very useful. Even effect by ps. VR

V1

In this sketch V1 is too near; to be right it would have been outside the paper.
